Toll Free: 888.247.4052

## Step 1 - Clean & Protect

WRP Bio Cleaner

WRP Fungicide

WRP Cobra Rods

For additional Tech Support or Help, visit us online at [wizzardrepairproducts.com/support](http://wizzardrepairproducts.com/support)

**Step 1:** Ensures your restoration area is clean with Bio Cleaner, an all-natural cleaner with Moldicide. Fungicide stops the fungus, termites, and other wood destroying insects and protects from future attacks. Lastly, Cobra Rods are optional but add years to your permanent restoration.

## Step 2 - Permanently Restore

WRP Liquid A & B

WRP Dough A & B

Before WRP

After WRP

**Step 2:** Step 2 is all about the Dough and the heart of our restoration system. First, mix equal parts of WRP's Liquid A & B and apply generously on the restoration area. Before it dries mix equal parts of WRP's Dough A & B and apply to the area and you are ready for step 3.

## Step 3 - Coat & Finish

Textured Powders

WRP Topping

**Step 3:** For Step 3, first mix WRP's smooth Powder to the WRP Topping until you have a consistency like peanut butter. Next, mix additional grades of Powder (smooth, medium, coarse) to match the restoration surface making it look like the original. Once dry, complete the restoration by painting the surface area. If you followed all three steps, **Congratulations**, you have permanently restored and protected that area.

## For Metal

### Step 1 - Clean & Protect

Mix Prep Step rust inhibitor with warm water. Apply the mixed Prep Step generously to your restoration area and use a metal brush to clean loose debris.

#### KITS AVAILABLE

### Step 2 - Permanently Restore

WRP Liquid A & B

WRP Dough A & B

Step 2 is all about the Dough and the heart of the restoration system. First, mix equal parts of WRP's Liquid A & B and apply generously to the restoration area. Before the liquid dries, mix equal parts of WRP's Dough A & B (for custom coloring, add universal tints into the soft dough) and apply to the area slightly over-filling. While dough is still soft, use a WRP Cut Off Knife to match the shape of the metal.

Before WRP

After WRP

### Step 3 - Coat & Finish

WRP Smooth  
Textured  
Powder

WRP Topping

WRP Zero Rust

First, mix WRP's smooth powder with WRP's Topping until you have a consistency like peanut butter. Once dry, complete the restoration by painting the surface area with Zero Rust or equivalent primer.

**Congratulations, you have permanently restored and protected that area.**

## For Stucco | Masonry

**Step 1 - Clean & Protect** Use a metal brush to clean loose debris.

**Step 2 - Permanently Restore**

It's all about the Dough and the heart of our restoration system. First, mix equal parts of WRP's Liquid A & B and apply generously to the restoration area. Before it dries, mix equal parts of WRP's Dough A & B (for custom coloring, add universal tints into the soft dough) and apply to the area slightly over-filled. Use a WRP Cut Off knife to match the level of the stucco.

**Step 3 - Coat & Finish**

Mix WRP Topping with a dry, all purpose stucco patch until you have a consistency like peanut butter and spread over the repair area. Before it sets, match the existing surface or pattern with a texturing tool or metal trowel. Once dry, complete the restoration by painting the surface area.
